

NRGSTREAM Trader 8.0 Release Notes

We are pleased to announce the release of NRGSTREAM TRADER version 8. Completely re-designed, TRADER 8 is faster, smarter and more intuitive. With the introduction of data filters, we have made finding the Data, Panels and Charts you need even easier than before.

Layout:

- Modern, faster, smarter.
- The latest technologies and best practices.
- User friendly, legible and easy to navigate.
- New action icons are embedded for quick access to features.

Filter Views:

- Apply the Filter View to quickly narrow down your search criteria. Multiple conditions may be applied. *For example, Data Type = Prices, ISO = ERCOT then, Apply.* Only the Streams, Charts and Panels that are relevant to your search will be displayed.

New API:

- The introduction of a new RESTful Web Service API changes everything. Every Stream now becomes an API End-Point providing access to over 200,000 Streams of data.
- Ultimate flexibility. Anyone that has experience with a 'RESTful API' will totally appreciate its value. It is compatible with many popular tools such as Python and 'R'. The access URL can be generated on an individual Stream, Folder or Filter View.

General:

- TRADER 7 option lets you quickly switch between TRADER 8 and 7 interfaces depending on your preference and comfort.
- We have used the latest and greatest technologies and best practices to design our new interface, providing you with improved functionality, performance and reliability.

We hope you enjoy!

The NRGSTREAM Team
